Art Unit: 3729

DETAILED ACTION

- 1. Applicant's election without traverse of Group I, claims 1-6 in the reply filed on 1/28/05 is acknowledged. Thus, non-elected claims 7-9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Invention II, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 1/28/05.
- 2. The title of the invention is not descriptive. A new title such as method invention is required that is clearly indicative of the invention to which the claims are directed.
- 3. The abstract of the invention should have been revised to indicate the method invention instead of a product.

Drawings

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "a first temporary layer" (see claim 1, step b) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure

Art Unit: 3729

number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

- 5. "A method" (claims 2-6) should have been : --The method—to reflect the dependent claim formats.
- 6. It is not clear whether "said temporary layer "(claim 1, step c) is the same as "a first temporary layer" as previously cited in step b.
- 7. "the step of " (claim 2, line 2) should have been changed to: --step of--.

Double Patenting

8. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA

Art Unit: 3729

1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

9. Claims 1, 5 and 6 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 18-26 of U.S. Patent No. 5,590,460 to DiStefano et al, hereinafter '460. Although the conflicting claims are not identical, they are not patentably distinct from each other because the subject matter claimed in the instant application is fully claimed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows:

The '460 claim a method for of making a microelectronic interposer of the present invention including the steps: providing a body defining a first surface (compare claim 18, step a); providing first temporary layer over said first surface; forming apertures passing through said body and said temporary layer (compare claim 18, step b); depositing a layer of an electrically conductive structural material in each of the aperture and over said temporary layer proximate said aperture thereby form contacts (compare claim 18, step c); and removing said temporary layer, leaving said contacts with outwardly flaring peripheral portions spaced vertically above said first surface of said body (compare claim 18, step e).

Art Unit: 3729

Claimed subject matters of claims 5 and 6 are also met by the '460 (compare claims 20-21 and 25).

10. Claims 2-4 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 18-26 of U.S. Patent No. 5,590,460 to DiStefano et al, hereinafter '460.

As applied to claims 2-3, noticing that the '460 does disclose the teachings of using B-staged or partially cured epoxy. (see col. 13 of the '460). Therefore, it would have been an obvious matter of design choice to provide a first layer of adhesive on the body in prior to the providing of the first temporary layer and wherein the adhesive layer is exposed after the removing of the first temporary layer since applicant has not disclosed that the process steps as described above or the method limitations of claims 2-4 are critical and are distinguishing features and it appears that the invention would perform equally well with the process and its applications associated with the use of B-staged epoxy to form in light of the '460 specification (see the '460, col. 13).

As applied to claim 4, noticing that it is well known in the art that adhesive consisting of polyimide and polyetherimide. Further, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the above material such as polyimide and polyetherimide as an operatively adhesive layer since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious.

Application/Control Number: 10/658,941 Page 6

Prior Art References

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Prior art references are cited for their teaching of a method for forming microelectronic interposer or the like.

Conclusion

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Minh Trinh whose telephone number is (571) 272-4569. The examiner can normally be reached on Monday -Thursday 8:00 am to 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Vo can be reached on (571) 272-4690. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
